

Dealing with Change

Using neuroscience to engage effectively with people during organisational change.

For the past decade, businesses have invested heavily in building organisational capabilities in change management. Understanding the people side of change is just as critical to the success of the change initiative as the change process itself.

This 1-day workshop has been designed using contemporary neuroscience research, methods, and tools you need to build the resilience and agility required to successfully navigate changes.

Target Audience

This course is suitable for participants involved in, or responsible for leading organisational change initiatives.

*It is recommended that participants with a lead role in implementing a workplace change undertake this course in conjunction with the **Change Management** workshop which covers the mechanics of the change management process and provides a practical and repeatable step-by-step approach to effectively managing change.*

Duration 1 day (9am – 4pm)

Investment \$695 per person

Learning Outcomes

- Communicate the change vision
- Understand psychological constructs of motivation and apply motivational strategies
- Understand and navigate stages of change
- Understand and address fears of change and change resistance
- Change agility and resilience strategies

Special Offer:

This workshop can be added to an Individual Development Package with our **Change Management (Process and System)** course to receive a discounted price.
